

Dasa H60

Dasa H60 is a user friendly and highly competent bucking software for measuring, controlling, monitoring, and managing the production process. The Dasa H60 software prioritizes (priority bucking) which lengths to cut based on a preferred length list. With the Dasa H60 you can be assured that the system always cuts your preferred logs, and you are guaranteed a high productivity and yield.

Dasa H60 has a modern and efficient user interface designed to be operated with the system's touchscreen. Settings and other functions in the system are accessed via the main menu with a logical and intuitive navigation. If the operator needs guidance there is a built-in support function that is accessed via the question mark in the upper right corner. If there is a problem somewhere on the harvester, the visual diagnostic pages give a quick overview so that downtime can be avoided.

The Dasa H60 software is designed according to StanForD 2010 and it is possible to export files in both StanForD 2010 and StanForD classic format. Forester H60 has a very good interface for managing lengths, tree species and product groups so it is easy to create a list of products and set the priority. Bucking instructions can also be imported into the program.

To combine the strength of the Dasa H60 system, the base machine, and the processing head, it is possible to customize functions and parts of the HMI.

To gain more benefits we recommend combining Dasa H60 with other software and services such as Dasa GeoInfo, Dasa Insight, Dasa Sync App and TeamViewer.

Key Features

- StanForD 2010.
- Logging contract management.
- Visual monitoring via the calendar view.
- Visual diagnostics pages.
- User friendly.
- Built in operator support.
- Operator customization (language, authorization level, settings etc.).
- Extensive report functions.
- Backup system.
- Customize functions and HMI.
- Fully supports touch screens.
- Can be combined with other software products.

Technical Data

Installation requirements
Software for PC dOP50C and dOP45C, Windows 10.
Hardware key with valid license.

Languages
Available in 16 languages. Swedish and English is included in the software package.

Import formats
Prio-file created in Forester H60.

Export formats
StanForD 2010: hpr, hqc, mom.
StanForD Classic: prd, pri, ktr.
Reports: pdf, xls, txt, pptx.

At Dasa we aim to be a positive force in the change towards sustainability based on a more circular economy.

To be clear about this we defined a symbol to stand for Digitalization, Connectivity and Sustainability, Dasa DCS. We reserve this symbol for products that have taken a significant step towards this mission thanks to these three entities in combination. When the DCS symbol appears on a product, it's a statement saying that this is not just a product, it's part of something bigger.
