

Dasa Insight

Dasa insight is a cloud service for production and operational monitoring. Dasa Insight summarizes and visualizes the data from StanForD-files helping you to gain knowledge of your production. Which operator needs extra training and when do you make money and when do you lose money? The service is easy to use, and you will have no problem using Dasa Insight.

Dasa Insight can handle StanForD-files from different machine brands and there are several ways to transfer files from a machine to the Dasa Insight cloud; Either directly via a cellular or satellite connection, or via the Dasa Sync App installed on a smartphone. It is also possible to email the files to Dasa Insight cloud. Dasa insight is possible to combine with Dasa Fleet F.

Regardless if you own one machine, several machines or a sawmill, Dasa Insight will save you time and money. Time should be spent on analyzing instead of administrating.

Key Features

Dasa Insight summarizes and visualizes the data from StanForD-files helping you to gain knowledge of your production. Which operator needs extra training and when do you make money and when do you lose money

Dasa Insight can handle StanForD-files from different machine brands and there are several ways to transfer files from a machine to the Dasa Insight cloud

Operation Monitoring can be summarized and viewed for your entire fleet of machines, or you just select an individual machine for in-depth analysis.

At Dasa we aim to be a positive force in the change towards sustainability based on a more circular economy.

To be clear about this we defined a symbol to stand for Digitalization, Connectivity and Sustainability, Dasa DCS. We reserve this symbol for products that have taken a significant step towards this mission thanks to these three entities in combination. When the DCS symbol appears on a product, it's a statement saying that this is not just a product, it's part of something bigger.
