

# Dasa Sync App

The Dasa Sync App is used for sending files from a forest machine to the cloud service Dasa Insight. The Dasa Sync App is designed for smartphones and is available for both Android and iOS. When “off-line”, the Dasa Sync App transfer files automatically via the local machine WiFi network. When the smartphone later gets cellular connection, the files are sent to the cloud.

USB memory sticks that are connected to a bucking PC is the most common reason for the PC getting contaminated by a virus or malware. The Dasa Sync App enables a safe way to transfer files without the risk of getting the bucking PC contaminated. To secure that only authorized smartphones can get access of the StanForD-files you have to pair the smartphone with the bucking computer and the cloud service. It is easy to configure the smartphone by using the automatically generated QR code, and you only need to do this the first time a new smartphone is used with the Dasa Insight service.

## Key Features

- Effective tool for transferring StanForD files.
- Cost efficient way to transfer files.
- Safe way to transfer files without the risk of infecting the Bucking PC with virus.
- Possible to use for machines both with or without internet connection.
- The Dasa Sync App works independently of machine brand.

## Technical Data

Installation requirements:  
Android, IOS.  
The PC that transfers files to the Dasa Sync App needs to have the program Dasa Insight PC installed, operator system Microsoft Windows 10 and WiFi.

At Dasa we aim to be a positive force in the change towards sustainability based on a more circular economy.

To be clear about this we defined a symbol to stand for Digitalization, Connectivity and Sustainability, Dasa DCS. We reserve this symbol for products that have taken a significant step towards this mission thanks to these three entities in combination. When the DCS symbol appears on a product, it's a statement saying that this is not just a product, it's part of something bigger.
